

CALLING ALL LANDHOLDERS

Pass the Pondi

Host floating greenhouse gas monitors on one or more of your farm dams for a week.

Farm dams give off methane, carbon dioxide and nitrous oxide. Working with RMIT University, we're measuring how much, and how better dam management can cut it. Lend us your dams for a week and become part of the research.

1

Book a week

Pick your dams and a week that suits you.

2

Get your Pondis

We drop off or you pick up. One per dam.

3

They measure

CO_2, CH_4 and N_2O, sent automatically for 7 days.

4

Pass them on

We collect or you return them for the next farm.

- Free to host
- A report on Southern New England farm dams
- Helps build a path to carbon credits

Book your week

Weeks are limited. One Pondi per dam, passed farm to farm.
